
F_{d}^{*}
V
ω
calculate & buffer (λ, μ)
grid by λ & normalize μ
$\tilde{\mu}_{\max,k}$
$\Delta\lambda$
MLP
$\tilde{\boldsymbol{\mu}}_{\mathrm{in},k}$ normalized values
$\boldsymbol{m}_k$ observation mask
$\tilde{\boldsymbol{\mu}}_{\max,k}$
$\tilde{\boldsymbol{\mu}}_{\mathrm{out},k}$ normalized MLP output
obtain raw $\mu-\lambda$ curve
smooth & correct μ scale
estimate $\hat{\lambda}_{\mathrm{peak}}$
$\times G_\mu$
1)smooth
2)rescale
$\hat{\lambda}_{\mathrm{peak}}$
$\lambda_{\mathrm{lim},k}$
LPF
$\hat{\lambda}_{\mathrm{peak},k}$
